CAREER SUMMARY:

Motivated Computer Science and Engineering undergraduate with hands-on experience in full-stack web development using MERN Stack. Skilled in building scalable web applications, including authentication systems, attendance automation, and e-commerce platforms. Enthusiastic about data science and actively exploring it alongside building scalable, user-focused web applications. Eager to apply my technical strengths to impactful engineering roles.

EDUCATION:

- Dr. Sudhir Chandra Sur Institute of Technology and Sports complex
Bachelor of Technology, Computer Science and Engineering | 2022 – 2026
CGPA: 7.36
- Alipurduar Newtown Girls' High School (H.S.)
12th : 82.16% – 2022
10th : 80.83% – 2020

SKILLS:

- **Languages:** Python, C++, C, Java, JavaScript
- **Front-end:** React, HTML, CSS, Bootstrap, TailwindCSS, Vite, React Router DOM, Axios, Context AP
- **Back-end:** Node.js, Express.js, Django, JWT Authentication
- **Database:** SQL, MongoDB
- **Cloud & DevOps Technologies:** Git/GitHub, Docker, CI/CD Pipelines

PROJECT:

Login System March 2023

- Developed a secure web-based login and authentication system using Django, with user registration and login functionality.
- Designed a responsive frontend and implemented backend logic for managing user authentication and access.

Technology used: Python, Django, HTML, CSS, JS

[Github](#)

Smart Attendance System August 2024

- Developed an automated attendance management system using Django and Firebase to record and manage attendance data efficiently.
- Implemented real-time attendance tracking with a user-friendly interface, reducing manual effort and improving attendance accuracy.

Technology used: Firebase DB, Python, Django, HTML, CSS, JS

[Github](#)

Grocery Shopping Website March 2025

- Developed a full-stack grocery shopping and supermarket management system for online order processing, inventory management, and billing.
- Implemented admin features for product, pricing, and stock management, along with sales/profit reporting and low-stock alerts.
- Integrated REST APIs with MongoDB to support efficient data management and real-time operations.

Technology used: Bootstrap, JS, Node.js, MongoDB, Express.js, Rest-API HTML, CSS, JS

FirstLook PCOS – AI-Powered PCOS Early Screening System June 2026

- Developed a full-stack AI-powered web application for early PCOS risk screening using Machine Learning.
- Implemented secure JWT authentication, user profiles, assessment history, and real-time prediction through a Flask ML API.
- Trained and evaluated Logistic Regression, Random Forest, SVM, and XGBoost models with feature selection techniques including ANOVA, LASSO, RFE, and BPSO; Logistic Regression achieved the best recall of **66.18%**.

Technology used: React.js, Node.js, Express.js, Python, Flask, Firebase, Machine Learning
